1.	Install Git	2
2.	Install Ruby 2.1.5.....	3
3.	Clone project.....	3
4.	Install gems	4
5.	Install SafariDriver.safariextz	5
6.	Config and run outpost	7

1. Install Git

- Download [Git dmg file](#) and then install

- Open terminal, type **git**. Install Xcode if it requires

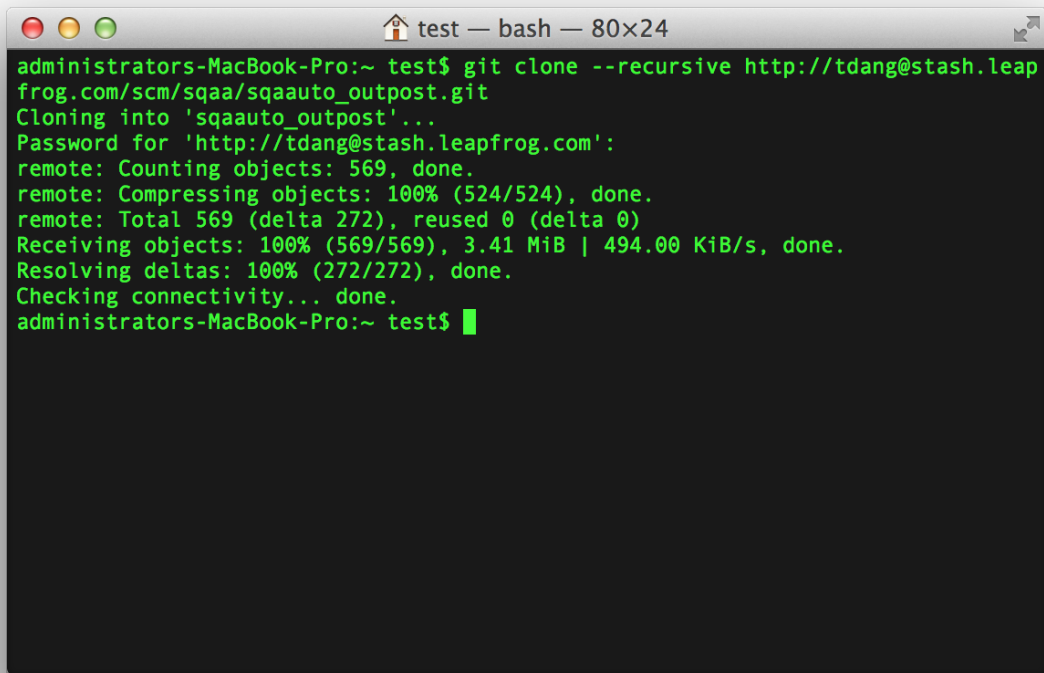

2. Install Ruby 2.1.5

- Install RVM (Ruby Version Management): open terminal and type "`\curl -sSL https://get.rvm.io | bash -s stable`"
- Close and open terminal, type: **rvm install 2.1.5**
- Follow install instruction in terminal

3. Clone project

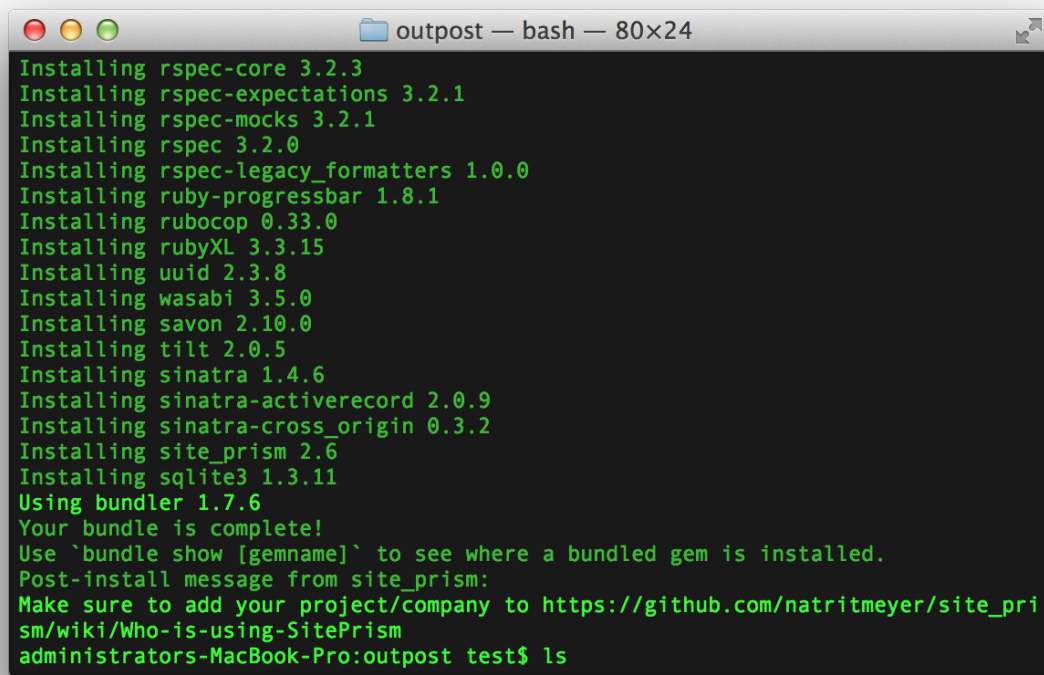

- Open terminal in folder which you want to clone
- Type: **git clone --recursive <http url>**
- Enter your credentials

A terminal window titled "test — bash — 80x24" on a macOS system. The window shows the execution of a git clone command to clone a repository from Stash. The output displays progress for counting, compressing, and receiving objects, along with connectivity checks.

```
administrators-MacBook-Pro:~ test$ git clone --recursive http://tdang@stash.leapfrog.com/scm/sqaa/sqaauto_outpost.git
Cloning into 'sqaauto_outpost'...
Password for 'http://tdang@stash.leapfrog.com':
remote: Counting objects: 569, done.
remote: Compressing objects: 100% (524/524), done.
remote: Total 569 (delta 272), reused 0 (delta 0)
Receiving objects: 100% (569/569), 3.41 MiB | 494.00 KiB/s, done.
Resolving deltas: 100% (272/272), done.
Checking connectivity... done.
administrators-MacBook-Pro:~ test$
```

4. Install gems

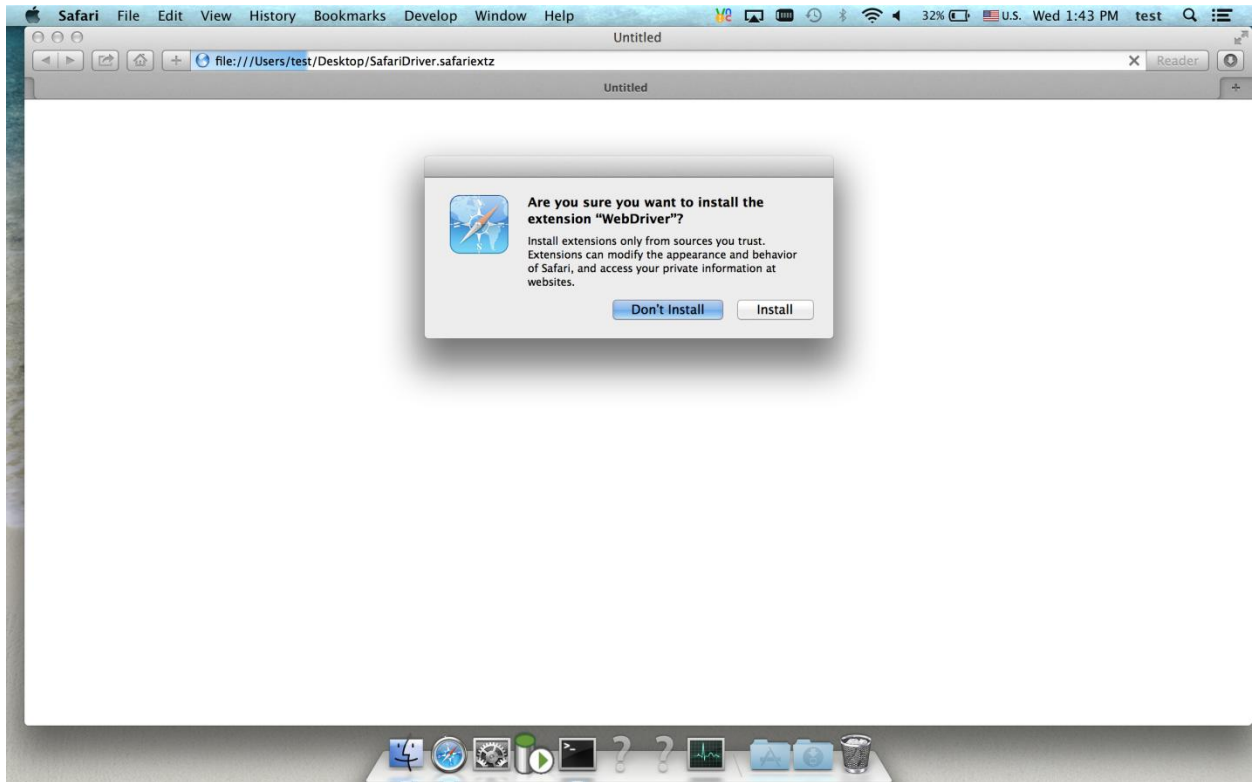

- Open terminal in {your_project}/sqaauto_outpost/outpost
- Type: **bundle**

A terminal window titled "outpost — bash — 80x24" with a dark background and green text. It displays the output of a bundle install command, listing various gems being installed. The window has standard macOS window controls (red, yellow, green buttons) in the top-left corner and a close button in the top-right corner.

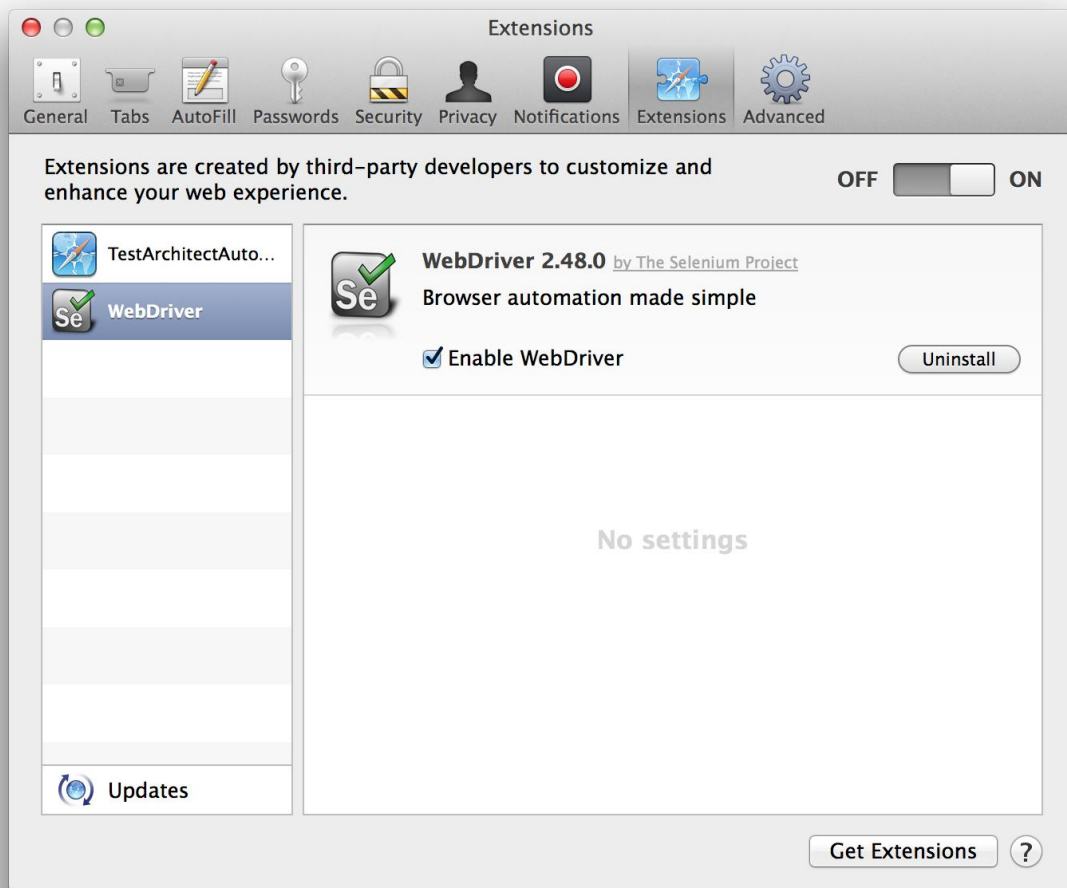

```
Installing rspec-core 3.2.3
Installing rspec-expectations 3.2.1
Installing rspec-mocks 3.2.1
Installing rspec 3.2.0
Installing rspec-legacy_formatters 1.0.0
Installing ruby-progressbar 1.8.1
Installing rubocop 0.33.0
Installing rubyXL 3.3.15
Installing uuid 2.3.8
Installing wasabi 3.5.0
Installing savon 2.10.0
Installing tilt 2.0.5
Installing sinatra 1.4.6
Installing sinatra-activerecord 2.0.9
Installing sinatra-cross_origin 0.3.2
Installing site_prism 2.6
Installing sqlite3 1.3.11
Using bundler 1.7.6
Your bundle is complete!
Use `bundle show [gemname]` to see where a bundled gem is installed.
Post-install message from site_prism:
Make sure to add your project/company to https://github.com/natritmeyer/site_prism/wiki/Who-is-using-SitePrism
administrators-MacBook-Pro:outpost test$ ls
```

5. Install SafariDriver.safariextz

- Download Safari Driver from [seleniumhq](https://seleniumhq.github.io/selenium/docs/en/installation/working_with_selenium_driver.html)
- Install Safari driver: double click on SafariDriver.safariextz file and follow install steps

- Make sure SafariDriver.safariextz extension was installed and enabled:

6. Config and run outpost

Please refer to Sections 4 and 5 in “**Outpost Guideline From End To End.pdf**” document
